Dajen Torralba

Software Engineer | Enterprise GenAI Applications | Systems Development
dajen.s.torralba@gmail.com • 056 466 0925 • Riyadh, Saudi Arabia

SUMMARY

AI software engineer dedicated to building technology that feels personal and helpful. Experienced in full-lifecycle software development across robotics, cybersecurity and enterprise applications, and recently focused on building AI-powered applications and agents that streamline everyday business work. AWS Certified AI Practitioner and Cloud Practitioner, with a strong BS Computer Science foundation. Eager to bring technical depth and a drive for innovation to a purpose-driven team.

SKILLS

- **AI & agents:** AI-enabled application development, AI agent design and validation, Claude, Azure OpenAI and AWS AI models, prompt engineering, model evaluation, AI product testing, workflow automation, local LLM deployment
- **Machine learning:** PyTorch, TensorFlow, CNNs, classification and regression, model training and evaluation, computer vision, ROS and ML model integration
- **Languages & engineering:** Python, C, C++, APIs, systems programming, unit and integration testing (PyTest, GTest)
- **Cloud & DevOps:** AWS Certified (Cloud Practitioner, AI Practitioner), Microsoft Entra ID SSO integration, Docker, CI/CD (Bamboo), automated deployments, Git workflows
- **Tools & delivery:** VS Code, Visual Studio, JetBrains, Jira, Confluence, Bitbucket; UI/UX prototyping, vendor coordination; Agile/SAFe, Scrum Master experience

EXPERIENCE

Riyadh, Saudi Arabia
Digital Product Associate (AI Agents & Applications) Aug 2026 – Present

- Designed and built an AI-assisted bilingual poster design platform for company-wide internal communications, now slated for the company intranet (see Projects).
- Built working prototypes of AI agents for internal business workflows, covering document review and data validation.
- Created design prototypes for the company's internal app.
- Liaise with the vendor of the company's AI platform to raise and follow up on platform issues.
- Execute rigorous, iterative quality assurance on emerging AI products.

Trend AI / Trend Micro Inc. Pasig City, Metro Manila, Philippines
Engine Software Engineer Aug 2025 – Mar 2026

- Developed and maintained high-performance engine and kernel modules for threat detection and real-time system analysis.
- Applied Windows Internals and API hooking to build reliable, low-latency system components.
- Contributed to AI-driven automation initiatives that improved code delivery, testing and operational efficiency.
- Supported rapid-response and reliability efforts with cross-functional teams; took part in code reviews and design discussions.

Dyson Electronics Pte. Ltd. Santo Tomas, Batangas, Philippines
Robotics Software Engineer Sep 2023 – Aug 2025

- Built and optimized robotics functions: particle detection, classification, feature matching, navigation, and localization.
- Designed and maintained inference pipelines for real-time sensor processing and decision-making.
- Led high-complexity epics as Team Lead and served as Scrum Master, running planning, ceremonies and cross-team coordination.
- Wrote unit and integration tests (PyTest, GTest) for reliability and regression stability across robotics modules.

Texas Instruments Inc. Baguio City, Benguet, Philippines
Application Developer Intern Jun – Aug 2022

- Developed a web-based data retrieval feature used across test and business functions, improving departmental efficiency by an estimated 60–70%.

Al Jazirah Vehicles Agencies Co. Ltd. Riyadh, Saudi Arabia
IT Helpdesk Intern Jan – Mar 2019

- Provided IT support covering user management, system access, and troubleshooting.

PROJECTS

AI-Assisted Poster Design Platform, Cenomi Centers 2026

- Built a freeform canvas editor with a bilingual (Arabic/English) announcement template and built-in brand assets, so non-technical departments can produce on-brand posters on their own.
- Added an in-app AI assistant (Azure OpenAI) that generates poster content and arranges the layout from a single prompt.
- Implemented Microsoft Entra ID single sign-on, invite-only role- and department-based access, an approval workflow before export, and controlled email distribution of approved designs.
- Presented to senior leadership with positive feedback; slated for integration into the company intranet platform.

Trend Vision One AI Security, Trend Micro 2026

- Supported development of AI-enhanced security components integrated into enterprise-grade detection systems.

Dyson 360 Vis Nav Robot Vacuum, Dyson 2025

- Developed features and fixed bugs in perception, mapping and navigation for Dyson's intelligent machines.

Voice-to-Profile Prediction (Thesis), Saint Louis University 2023

- Built an end-to-end ML system that predicts age, sex, height and weight from voice input using a PLP-CNN approach.
- Trained deep learning models in PyTorch and TensorFlow, covering preprocessing, feature extraction and evaluation.
- Deployed the model in a lightweight web app for voice upload and real-time inference.

CERTIFICATIONS

AWS Certified AI Practitioner (AIF-C01), Amazon Web Services May 2026 – May 2029
Validation ID: 560c01eee0bb447b8fff0b57cf965ce9

AWS Certified Cloud Practitioner (CLF-C02), Amazon Web Services May 2026 – May 2029
Validation ID: dd1319a0852e492588a6de2f751a08e7

EDUCATION

Saint Louis University Baguio City, Benguet, Philippines
Bachelor of Science in Computer Science 2019 – 2023

- Graduated Cum Laude, GWA 90.73; Dean's Lister every academic year; DOST JLSS Scholar (2021–2023)
- Coursework: Machine Learning, Data Mining, Algorithms, Operating Systems, Computer Vision, Software Engineering

Future Generation Philippine International School Riyadh, Saudi Arabia
STEM Diploma

- Graduated With Honors, GWA 93.268; Model Student of the Year

LEADERSHIP

- **Project Leader,** Saint Louis University (2019–2023): directed project execution, research and team coordination.
- **Secretary-General,** Congress of Louisians, Saint Louis University (2022–2023): ran documentation, communication and governance for the central student body.
- Earlier student-government roles included Vice-President (Integrated Confederacy), Chairperson (RIGHTS) and Director for Communications.
